DATE: 08 June 2009

SUBJECT: 2009 Seal Coat *Update*

FROM: Andrea Goodson
Public Information Coordinator

The City of Odessa will begin its annual street seal coat project as early as *Monday, June 15*. Ronald R. Wagner Co. of Kendalia, Texas has been contracted to seal coat approximately 56.2 miles of streets. The work is expected to be complete by August 1.

Major streets to be seal coated include:

- University Boulevard between Andrews Highway and Dixie Boulevard
- Yukon between Andrews Highway and Grandview Avenue

Many residential streets generally located between Andrews Highway /Grant Avenue to Dixie Boulevard will also be seal coated. A map and list of the streets to be seal coated has been provided and is available on the City's website, www.odessa-tx.gov.

During the actual seal coating process the street will be closed for approximately an hour and then immediately reopened to traffic. Parents should keep children away from seal coat work areas.

Motorists are advised to use caution in the area of construction. Motorists are encouraged to use alternative routes when possible and drive less than 20 miles per hour on freshly seal coated streets. Residents should park their vehicles off the street when the seal coat operation is underway on their street.

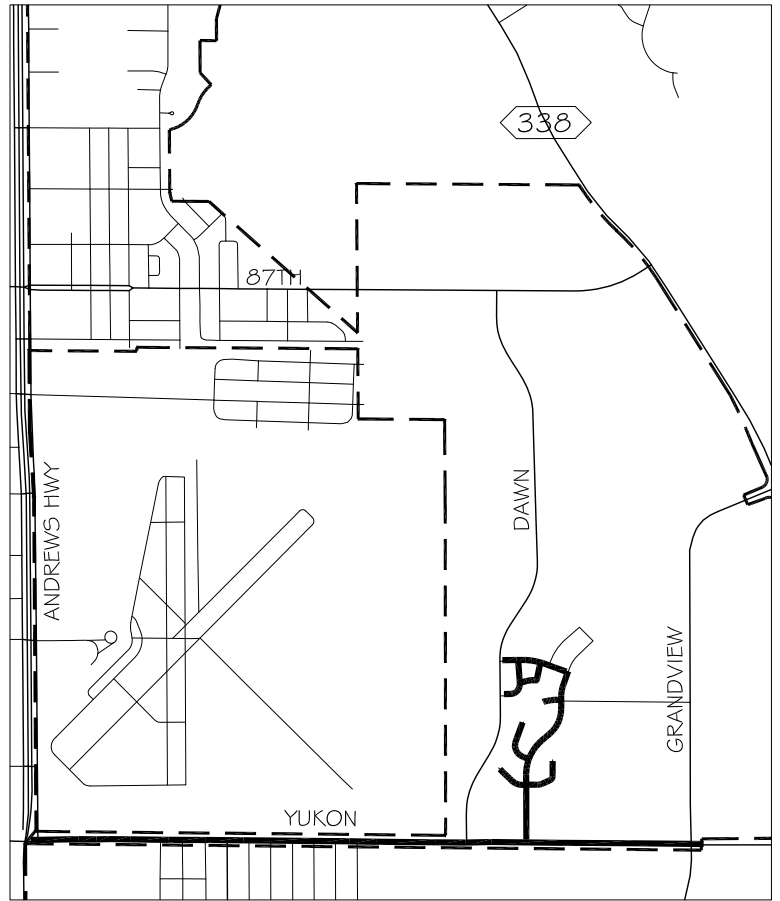

Seal Coat work consists of the application of a layer of liquid asphalt followed by a layer of aggregate rolled into the surface. The purpose of seal coating is to seal cracks in the surface to prevent moisture from entering the pavement structure and provide a new wear surface thereby extending the life of the pavement.
